The extraction of sugar from sugar beets by means of
a continuous mechanical process was studied. This
process consisted of a combination of treatment with
hot water with partial pressing, and subsequent dif-
fusion. Calculation of the amounts of sugar and dry
matter remaining after leaching in the various steps of
the process, or of the amounts of sugar and dry matter

DESCRIPTORS: *Television cameras, *Electron
tubes, Interference, Sources, Cameras.

An interference pulse as a rule appears during the
blanking interval of the picture signal during the
operation of Vidicon cameras. This interference pulse
originates from the return trace of the horizontal
sweeping system. In the signal amplifier this inter-
ference pulse can give rise to inadvertent displace-
ment of operating points in tubes with clamping
